

# ORACLE PBCS LEARNING

*“Keyteach did an outstanding job in introducing our team to PBCS (Oracle Planning and Budgeting Cloud Service). Their knowledge and expertise has real depth and the training they developed was completely tailored to our very specific needs”*

**Steven Christie, Finance Transformation, SSE**

Leading energy supplier, SSE, is introducing Oracle’s Planning and Budgeting Service (PBCS) to its existing EPM suite. Unlocking PBCS’s potential is both critical and challenging. For SSE, this required a combination of consultancy and training tailored to help the team gain an in-depth understanding of PBCS to support its implementation.

Keyteach developed customised training with a strong consultancy-style approach to help SSE administrators feel confident with PBCS. The classroom training and its delivery was highly flexible to capitalise on the project teams existing knowledge while supporting the development of new understanding and skills for Oracle Cloud. It used both a generic and SSE’s test environment to ensure all learning was based on real and practical examples in a hands-on manner.
